**Total whales killed since the moratorium went into effect: 30,429**

\* Southern hemisphere pelagic (high seas) catches are taken in the southern hemisphere summer, and reported in the following calendar year, while coastal catches are reported in the calendar year in which they are taken. For example, 1986 catches include the southern hemisphere whaling season of 1985/86 + coastal catches during 1986.

Rise in Scientific Whaling
