Picnic Basket in Covid 19 Times

Scenario B: Lockdown/synchronous learning

In the times of a pandemic we are meant to adjust and as schools might be in lockdown with full Covid 19 measures we regretfully have to postpone the Picnic Basket circulation on loan as was intended nor can we ask schools to create their own. Instead we have adjusted the activities so that those of you who still wish to work on sustainable diets can work on the main themes via synchronous learning.

Start by reading the [Introduction for teachers](#), the [Game instructions](#) and the [annual calendar](#) to get an idea of the main themes. Then move on to the activities described here.

In short:

- For the Homemade food day instead of cooking in class you will have a yuck to yum recipe brainstorm, watch videos, take and create sustainable diet quizzes.
- For the Fruit day you will find variations of both the banana story and the tutti frutti game.
- For the No food waste day you will find ideas for a quizathon, a word cloud and a poster creation game.

Good luck and let the picnic begin!

LET'S COOK!

From yuck to yum! Initiate the distance learning class by placing in front of you common “yucky for children” ingredients (e.g. broccoli, aubergine, zucchini, tahini, muesli etc.) and asking the pupils to suggest possible recipes in order to make them “yummy”, i.e. more appetizing.

Show to your pupils these short videos on homemade food:

<https://vimeo.com/showcase/4783258/video/235227629> &
<https://vimeo.com/showcase/4783258/video/235228219>

Pause the videos at appropriate points and ask pupils about the feelings of the hero. What is wrong in their opinion and why? Watch the video until the end and discuss the environmental dimensions of homemade vs readymade food.

Quiz time!

Have pupils do the [quiz](#) and design your own (you can use google forms, survey monkey or mentimeter) on right & wrong sustainable choices of ingredients for various recipes. Have pupils brainstorm on Q&As.

A TUTTI FRUTTI GUESS WHICH...

A variation... Instead of the [Tutti Frutti Uno](#) use the cards to play a new guessing game. Show all the different fruit and vegetable cards on your screen.

You'll never guess... You or one of the pupils choose a card. The other pupils must guess which card it is by asking questions that can be answered by yes or no. Through the process of elimination, players will eventually be able to "guess" the chosen card.

Each player gets one yes or no question per turn and may only make one guess. If a player successfully guesses the opponent's chosen card, they win; if the guess is wrong, they lose.

Ideas for questions

- Is it a fruit?
- Is it a vegetable?
- Does it grow in the spring/summer/fall/winter?
- Is it red/green/purple etc?
- Does it grow on a tree?
- Do we boil/grill it?
- Do we put it on a pizza?
- Does it have a funny name?
- Does it smell nice?

BANANA STORY VARIATION

Story line... Present the cards of the Picnic Basket "[Banana story](#)" sharing your screen. Discuss with the pupils the correct order which shows the story of its production.

Ask pupils to think of their favorite fruit. Ask them to draw its story in separate papers as homework.

Present the stories when they are ready. Discuss why the shortest stories are the most sustainable ones.

Keep your distance

Find out how many fruits you need to place between you and your classmates or friends to keep a safe distance!.

NO FOOD WASTED!

POSTERit!

Show pupils the video <https://vimeo.com/album/4783258/video/235226846> and ask them to design a no food waste poster and show it via share screen in class.

Quizathon. Brainstorm with pupils on common food waste mistakes. Pick the 5-7 more popular ones and create questions for a class food waste quiz. You can use google forms to create it digitally. Pupils then test their friends and families.

CLOUDit!

Each pupil suggests no food waste ideas and sum it up in 1-3 words that they can write in the chatbox. You then create a no food waste word cloud with a relevant digital app (i.e. [WordArt](#))
