

Maritime Spatial Planning in the North-East Atlantic

Technical Annex

WWF European Policy Office

OCTOBER 2022

Technical Annex:

Maritime Spatial Planning in the North-East Atlantic

MSP assessment framework

Holistic and integrated approaches to Maritime Spatial Planning (MSP) are necessary to secure a sustainable blue economy, address the levels of environmental degradation in our seas and support the development of impact assessment tools whose scope is wide enough to consider complex maritime seascapes against the backdrop of the ecosystems within which they exist. It is in this vein that World Wide Fund for Nature (WWF) advocates for an ecosystem-based approach (EBA) to MSP, which views maritime spaces as integrated systems that provide various resources and services to both people and the planet and acknowledges that ecosystems have a limited carrying capacity to remain healthy against human pressures. An EBA to MSP can transform how sea spaces are accessed and managed. It does so by increasing national and regional abilities to integrate and adapt to multi-sectoral changes, thus delivering sustainable economic benefits within oceanic boundaries.

Since the establishment of the Maritime Spatial Planning Directive (MSPD, 2014/89/EU), WWF has been working with Member States (MS) to ensure that the Directive's implementation aligns with an ecosystem-based approach. A core element of this work has been the translation of the MSPD's requirements for MSP into 33 indicators that, when all achieved, would successfully deliver an EBA to MSP. The development of WWF's indicators is based on a large literature review and expertise across the network. The assessment framework developed intends to analyse countries' EBA to Maritime Spatial Planning. The underlying criteria for measuring the MSP plans were derived from the criteria listed in the *WWF guidance paper: Ecosystem-based Maritime Spatial Planning in Europe and how to assess it*¹ and *A practical approach toward an Ecosystem-based Approach in Maritime Spatial Planning – including a method for the evaluation monitoring and review of EBA in MSP*² by the European Commission. To guarantee the indicators developed can be easily applied and assessed by MS, closely related subjects were merged into a single indicator and some highly abstract and complex indicators such as “following blue economy and finance principles”, or “clear economic objectives defined” were turned into “indicator questions” allowing to differentiate the score for the respective indicators.

These indicators fall under four categories, each assessing a key domain of sound MSP in national MSP: inclusion of nature, socio-economic considerations, good ocean governance, and comprehensiveness of the complete MSP process. For measuring the performance, a three-step scale from zero to one (0 - 0.5 - 1) was provided. For each indicator, three description choices were offered according to the level of fulfilment of the criterion. In the evaluation part of this report, the three scoring categories were changed into a per cent-scale (0 % to 100%) to simplify the visualisation of data. The full list of indicators and respective scoring criteria is available for each category in the tables below.

¹ WWF European Policy Office, 2021, WWF guidance paper: Ecosystem-based Maritime Spatial Planning in Europe and how to assess it.

² European Commission, 2021, A practical approach toward an Ecosystem-based Approach in Maritime Spatial Planning – including a method for the evaluation monitoring and review of EBA in MSP.

Inclusion of nature				
Indicator Name	N°	Research Question	Score	Scoring (criteria)
Strategic environmental assessments (SEA) conducted	1	Were appropriate Strategic Environmental Assessments (SEA) conducted in line with measures based on the mitigation hierarchy (avoid, compensate, restore)?	0%	No SEA was carried out – environmental, social and economic impacts were qualitatively discussed but not reflected in MSP measures
			50%	SEA conducted according to minimum standards of the EU SEA Directive, with none or only a few mitigation measures put in place
			100%	Spatially-specific SEA conducted, including proposals for measures that align with the mitigation hierarchy (avoid, compensate, restore), documented revisions of proposed conservation activities, alternative MSP scenarios and a post-adoption statement of mitigation measures
Consideration for ecologically-sensitive areas	2	Was appropriate mapping of ecologically-sensitive areas conducted and were these included as “sensitive area” layers in the draft plan?	0%	No specific investigations were conducted for ecologically-sensitive areas
			50%	Sensitivity issues were described in the SEA but not systematically mapped
			100%	Appropriate sensitivity mappings were conducted and included as spatial layers in the draft plan
When data is missing/insufficient, Precautionary Principle applied	3	Were the Precautionary Principle and the principle of preventive action applied when no information on the state of the marine environment was available?	0%	No guidelines for the application of the Precautionary Principle during the planning or spatial designation phases of the plan were included
			50%	A baseline for the application of the Principle was defined; procedures for knowledge acquisition were defined for cases where precaution triggers additional research, mitigation or cessation of certain activities (unless new knowledge becomes available)
			100%	Rules for the application of the Precautionary Principle were defined, but spatial exclusion of at-sea activities whose environmental impacts are unclear was postponed to the next MSP planning cycle

Planned activities fall within environmentally-sustainable limits	4	Were cumulative impact assessments of all maritime activities conducted to ensure that combined impacts do not exceed the sea's carrying capacity?	0%	No written reference to cumulative impacts and no cumulative impact assessment to examine all pressures and determine/limit spatial designation for maritime activities was carried out
			50%	The plan may include written references of cumulative impacts or a simple matrix describing conflicting activities, but a robust assessment of these was not executed
			100%	A cumulative impact assessment was conducted based on recent spatial data, resulting in restrictions in both the regulatory framework and within the maritime spatial plan for cumulatively harmful impacts
Land-sea interactions identified and analysed	5	Were land-sea interactions (relevant coastal uses, pressures and activities) identified and analysed, with their impacts on the marine environment examined?	0%	Analysis of pressures from coastal or land activities were restricted to the planning phase of the maritime spatial plan, with no foreseen measures to mitigate impacts on land
			50%	Interactions between land-sea activities were analysed and discussed during the consultation process; however, concrete actions to address the potential consequences discussed with stakeholders were not included
			100%	Impacts of land-sea activities were analysed and spatial or political measures have been applied to mitigate them, with regular exchanges between MSP authorities and those in charge of ICZM, WFD.
Network of well-managed Marine Protected Areas included	6	Are MPAs included in the plan's priorities? Are these areas in line with the EU Biodiversity Strategy targets? Are MPAs coherently connected nationally, as well as across countries and regional seas? (Indicator 6 is an average calculated from the scores of sub-indicators 6a, 6b and 6c, which assess the various aspects of MPA designation and management)		
	6a	Are MPA management provisions included as priorities in the maritime spatial plan?	0%	Analysis of pressures from coastal or land activities were restricted to the planning phase of the maritime spatial plan, with no foreseen measures to mitigate impacts on land
			50%	MPAs are mapped and regulated, but their priority use overlaps with maritime activities whose functions conflict with protection (e.g. fisheries, mineral extraction, offshore wind)
			100%	All MPAs are mapped, regulated and designated as a priority in the case of multi-use areas in the plan
6b	Do MPAs cover the EU Biodiversity Strategy targets of at least 30% protected and at least 10% strictly-protected areas in coastal areas and EEZ	0%	MPAs cover 10% or less of areas under national jurisdiction (EEZ and coastal areas)	

		waters?	50%	MPAs cover 10-25% of areas under national jurisdiction, and gaps in establishing networks of MPAs have been identified in the plan
			100%	MPAs cover at least 30% of areas under national jurisdiction with at least 10% designated as strictly protected (i.e. where human visitation, use and impacts are strictly controlled and limited to ensure the protection of natural habitats); gaps in establishing networks of MPAs were identified and adequately resolved in the plan
	6c	Are there measures to connect and manage MPAs in a coherent network within the planning area, across countries and in regional sea basins?	0%	No measures to enhance connectivity between MPAs are included
			50%	Measures for MPA coherence and connectivity are included, however, these measures are poorly aligned with neighbouring countries
			100%	Measures for MPA connectivity and coherence which align with the actions of neighbouring countries have been included
Essential marine habitats connected via blue corridors/ green infrastructure	7	Are blue corridors and green infrastructure connecting essential wildlife habitats, migratory routes and populations adequately addressed in the plan and part of the spatial mapping?	0%	Blue corridors have not been mapped and no concept of green infrastructure has been applied; the plan does not include spatial designations for blue corridors or green infrastructure
			50%	Blue corridors for some species were mapped and partly designated in the MSP
			100%	Blue corridors were fully mapped and included in part of the MSP regulatory framework; blue corridors were designated based on the green infrastructure concept (i.e. a network of natural and semi-natural environmental features designed and managed to deliver a wide range of ecosystem services)
Areas for nature restoration included	8	Are areas suitable for marine ecosystem restoration identified, included as spatial measures and accompanied by management plans?	0%	Marine ecosystem restoration has not been addressed in the plan
			50%	Restoration needs were identified, but not included in the plan
			100%	Restoration measures were identified and included in the plan
Blue Carbon ecosystems protected	9	Does the maritime spatial plan consider protection of blue carbon and coastal zones, ensuring sustainable utilisation and manipulation of	0%	Reflections on climate change impacts to coastal zones, including their protection and value for blue carbon storage, have not been acknowledged

		resources in light of climate change, and applying due consideration for CO2 certificates issued by National Determined Contributions (NDCs) and National Adaptation Plans (NAPs)?	50%	Protection of coastlines from the impacts of climate change and maritime activities have been acknowledged, with the plan highlighting coastal vulnerabilities in the face of a changing climate
			100%	Coastal protection and climate mitigation measures are included in the plan reflecting NDCs and NAPs for blue carbon storage

Socio-economic Considerations				
Indicator Name	N°	Research Question	Score	Scoring (criteria)
Marine ecosystem services assessed and included	10	Are marine ecosystem services properly addressed and translated into spatial designations?	0%	A detailed and spatial ecosystem service evaluation was not completed in the MSP designing phase, implementation phase, monitoring or enforcement phase; spatial designation for securing important ecosystem services is not included in the plan
			50%	There is a baseline identification and evaluation of ecosystem services, including areas for ecosystem service protection
			100%	Ecosystem services have been comprehensively mapped, economically valued and included in the plan's spatial designations
Risk in conflicts among users addressed	11	Does the plan analyse interactions of maritime stakeholders and propose measures to reduce conflicts that could lead to social tensions, accidents and/or pollution? For example, does it ensure no conflicts will occur between maritime sectors and area-based conservation management measures?	0%	The plan only addresses obvious existing conflicts between maritime sectors
			50%	The plan assesses potential conflicts using a conflict matrix and offers one solution
			100%	The plan analyses how various maritime activities interact and takes steps to reduce conflicts, particularly between maritime sectors and area-based conservation measures, which can lead to social tensions, accidents and/or pollution

Sustainable blue economy objectives and finance principles defined	12	Are clear economic objectives defined, with a focus on sustainable development and to align with the sustainable blue economy and Sustainable Blue Economy Finance Principles?	0%	Nearly no economic objectives or measurable sector goals have been defined and included as spatial measures in the plan; no maps were developed nor were calculations made to support this stage of MSP
			50%	Quantifiable spatial indications have been included when fulfilling EU policy targets (e.g. renewable energy, MPA coverage); sustainable blue economy features are not a priority and the plan does not include any financial or social decision-making tools
			100%	Clear objectives are defined for all sectors after robust assessment (e.g. CIA, SEA), with the most sustainable scenario included in the plan; when decisions are different from the ones discussed with stakeholders, comprehensive justification is provided; additionally, the revision of measures that deviate from a sustainable blue economy was foreseen in the monitoring phase
Industry employment and income generation forecasted	13	Did the MSP cycle include multiple spatial evaluations of different job and income generation scenarios, and were these assessed against environmental criteria?	0%	Only the current status of maritime activities and simple extrapolations of job and income scenarios were included in the plan, without any spatial mapping of economic or social aspects
			50%	Basic economic and social scenarios have been mapped, but these were not assessed against environmental criteria or included in the plan
			100%	Different environmental, financial and job development scenarios were assessed, mapped and included in the plan
Sea use by fisheries assessed and included	14	Are the spatial designations based on a thorough assessment of areas accessed by fisheries, incorporating requirements of the CFP and MSFD?	0%	Fisheries were not explicitly addressed in the plan – only a description was provided without any spatial designation
			50%	Only fisheries subject to catch restrictions, TAC and quotas are assessed and included in the plans.
			100%	All fisheries within the Member State waters (including territorial sea), were assessed and included in the plan's spatial measures; spatial designation was based on comprehensive decision support tools, which align with CFP and MSFD requirements
Offshore renewable energy targets included - CO2 neutrality respects biodiversity objectives	15	Were the national offshore renewable energy targets for carbon neutrality translated into spatial designations while respecting biodiversity recovery and resilience?	0%	The 2030 climate & energy targets of the European Green Deal, including the climate-neutrality target, are mentioned in the regulatory framework but have not been translated into the plan's spatial designations
			50%	Areas for offshore renewable energy development were spatially designated in the plan, but without consideration for biodiversity recovery and marine ecosystem resilience

			100%	National offshore renewable energy targets for 2030 and for full carbon neutrality were translated into spatial designations while respecting biodiversity recovery and resilience
Results from cross-sectoral public consultation incorporated	16	Did stakeholder consultations involve all actors and take place across the entirety of the MSP process with sufficient time for individuals to access documents? Was input from the public consultation taken into account in the drafting of the plan? Were data and maps shared publicly and utilised across administrative and sectoral borders?	0%	Stakeholder participation during the consultation phase was limited to information available based on the EU's right to environmental information standards
			50%	Stakeholders were actively involved in the plan's assessment and implementation phases, were offered additional planning documents on demand and regularly received justification for the results of cases where they made an intervention
			100%	The MSP consultation process was fully transparent – with stakeholders involved in all phases of the plan, including the formal MSP consultation fora, and all interactions and government decisions publicly justified

Good Ocean Governance				
Indicator Name	N°	Research Question	Score	Scoring (criteria)
Temporal and spatial uncertainties in the era of climate change addressed	17	In light of the climate and biodiversity crises, does the plan include spatial and temporal uncertainty aspects in its regulatory framework? For example, are there free (i.e. undesignated) areas that could, in the future, be accessed for new activities, additional protection, etc.?	0%	The plan does not address climate scenario uncertainty (e.g. space occupation, sectoral changes, technological development) and is mainly based on current activities; almost all sea space is designated
			50%	Uncertainty aspects were verbally addressed but only mentioned in the plan for consideration in future planning cycles; the plan didn't include a systematic evaluation and designation of "free space" (i.e. marine areas without a spatial designation)
			100%	The plan systematically considered uncertainty aspects in planning scenarios and addressed these by designating at least 20% of the sea area for future sustainable development activities and/or technical improvements

Aligns with EU policies for seafloor and habitat protection	18	Have healthy biological diversity, seafloor integrity and essential fish habitats been adequately addressed to comply with the MSFD primary objective of achieving Good Environmental Status (GES) of EU seas (Annex I)?	0%	The descriptors of GES for seafloor and habitat protection of the MSFD are acknowledged, but none of the proposed additional spatial measures or mappings were included in the plan
			50%	Limited assessment of GES for seafloor integrity and fish habitat is incorporated into MSP planning processes
			100%	Comprehensive assessment of GES for seafloor integrity and fish habitat is incorporated into MSP planning processes
Aligns with EU policies for reduction of noise pollution	19	Has the impact of noise pollution been properly addressed in the maritime spatial plan in line with the MSFD objective for GES (Descriptor 11)?	0%	No specific investigations have been conducted for underwater noise pollution
			50%	Impacts of noise pollution have been investigated but no spatial measures to address their impacts were proposed
			100%	Underwater noise pollution has been mapped and measures addressing the MSFD status were included in the plan; additional national regulations for noise mitigation are in place
Aligns with EU Habitats Directive and Birds Directive	20	Have spatial measures in the plan underpinned the Birds Directive and the Habitats Directive?	0%	The requirements of the Birds and Habitats Directives have not been considered in the plan's spatial measures
			50%	Pressures from harmful activities were identified (i.e. by SEA) and some measures to protect wildlife and natural habitats were included in the plan
			100%	Impacts on species were identified and priority measures were given to species protection (beyond MPAs) in the plan's spatial designations
Vision for sustainable development in next 20 years included	21	Was a long term vision for sustainable development of maritime activities formulated (with clear objectives and a timeline), and does it delineate principles for developing the sea area across the next 20 years?	0%	No long-term vision has been elaborated that underlies the current planning process
			50%	A long-term vision strictly limited to the European Green Deal targets has been set up

			100%	A long-term vision encompassing EU and regional sustainability, social development, transparency and good governance principles has been politically agreed and is guiding MSP processes beyond the planning cycle
Legally-binding plan	22	Are the measures included in the maritime spatial plan legally binding, at minimum for public authorities?	0%	Measures included in the MSP are only recommendations and not legally binding
			50%	Measures are binding and enforceable by some public authorities
			100%	Measures are binding and enforceable for all decisions by public authorities; neighbouring countries have reached agreement on enforcement of transboundary measures
Cross-sectoral policies and timelines harmonised	23	Does the plan identify and align with other interconnected policies, and does the plan's timeline harmonise with those of other policies?	0%	The plan identifies interconnected EU and international policies, but the MSP timeline have not been aligned to match them
			50%	Interconnected policies were identified and the MSP aligns with some; however there is no harmonisation of timelines or initiatives to align relevant strategies to achieve EBA-MSP
			100%	Interconnected policies were identified and the plan has been aligned in accordance with these with harmonised timelines and policies of other sectors influenced to achieve EBA-MSP
Competent authority for delivering EBA-MSP in place	24	Is a competent authority with the mandate and capacity required to deliver and maintain a high-standard EBA-MSP in place?	0%	- MSP is led by short term projects, by universities or by one department of a sector-authority's department; no authority is designated to coordinate the plan's limited resources or access to spatial data
			50%	MSP is a permanent process, led by a sectoral agency with a clear mandate, access to existing data and limited expert staff
			100%	MSP is led by an agency with a high-level mandate and defined responsibilities, full access to data, capacity to process data and to run several spatial tools, conflict-resolution skills, as well as experts in natural science in addition to policy, sectoral and participatory processes
Various scenarios of sustainable sea uses considered	25	Does the plan explore the full range of instruments available for steering multiple at-sea activities toward sustainability?	0%	Planning only considered current maritime activities when analysing how diverse sectors and ecosystems may develop in the future; there was no consideration for a scenario-based or suitability of sites/activities analysis

			50%	Scenarios for different development priorities (e.g. sustainability, business as usual, renewable energy) were presented during the design and assessment phases of the plan, however, they were neither analysed nor discussed by stakeholders
			100%	A comprehensive set of future spatial development options were investigated, discussed and justified with stakeholders and the public; advanced tools to identify optimum solutions and trade-offs were used to improve the plan's measures

Comprehensiveness of the complete MSP process				
Indicator Name	N°	Research Question	Score	Scoring (criteria)
Planning based on best-available scientific evidence	26	Is the plan based on the best available data, including trends in marine species' health and populations, maritime activities (current and forecasted), as well as ecosystem capability and capacity to recover from human-induced impacts? In the face of data gaps, have new data collection processes been set up to support future plans?	0%	The plan is based on data that pre-dates the first MSP phases, was non-spatial and/or more than five years old
			50%	The plan is based on recent data and forecasts using present trends, with non-spatial data transformed into spatial data to be relevant to the MSP process
			100%	The plan is based on the best-available data, including trends on marine species and activities, ecosystem capability and capacity to recover from human induced changes, as well as current and forecasted maritime activities; new data collection processes were created to close data gaps during the plan's drafting
Industrial, ecological, cultural and societal functions included	27	Were all socio-economic, ecological and cultural uses of the sea thoroughly assessed at the same level of detail and translated into spatial designations?	0%	Only traditional maritime activities (e.g. fisheries and transportation) were addressed in-depth, based on existing activities
			50%	Only a limited number of maritime activities were addressed and translated into maps; important ecological, societal or cultural functions were not addressed in detail or included in spatial designations

			100%	All maritime related activities and sites were thoroughly assessed, and included in spatial designations and mapping
Cross-border cooperation for good planning, monitoring and enforcement	28	Is cross-border cooperation in place to harmonise MSP procedures (planning, monitoring and EBA standards) in order to anticipate and solve transboundary conflict via regional sea conventions or other European maritime information-sharing fora?	0%	Apart from short-term projects, the plan does not include structures for systemic cross-boundary cooperation
			50%	Regular regional and EU structures for information sharing are in place for case-specific bilateral exchange and conflict resolution to harmonise MSPs; however, significant differences between neighbouring plans remain
			100%	Binding regional and EU mechanisms, ensuring the mitigation of negative environmental and socio-economic impacts in adjacent regions are in place to mitigate conflict between neighbouring countries and maritime activities
Adaptive management framework applied	29	Is adaptive management built into the planning architecture? For example, were EBA-MSP objectives included from the offset, and will they be gradually improved as knowledge, methods, experience and mutual learning with stakeholders increase over time?	0%	Planning procedures are fixed and only designed for the current planning cycle
			50%	Basic objectives and procedures are fixed, with only widely accepted tools and methods able to be applied in future MSP cycles
			100%	Data sources are actively widened, new tools promoted and used, knowledge gaps filled and regular monitoring of progress towards goals is standard practice
Interdisciplinary science supported decisions	30	Was the plan developed based on a broad knowledge base involving interdisciplinary science and a comprehensive set of decision support tools (e.g. mental models, Marxan/ Marxan with zones, carrying capacity tools) to fully capture the ecological integrity and structural components of biodiversity?	0%	The agency responsible for drafting the plan provided in-house knowledge during the development phase
			50%	The plan's development included both in-house and external expert knowledge from selected disciplines
			100%	The plan's development was based on interdisciplinary science and a comprehensive set of decision support tools (e.g. mental models, Marxan/ Marxan with zones, carrying capacity tools) that fully capture biodiversity's ecological integrity and structural components
Sustainable multipurpose use through time and	31	Are areas identifying spatial and temporal multi-purpose maritime activities included?	0%	The plan does not address the temporal concern of at-sea activities, nor examines the sustainability of multi-use areas

space included			50%	The plan does not address the temporal concern of at-sea activities but identifies and includes sustainable multi-use areas
			100%	The plan identifies and includes spatial and temporal uses of at-sea activities, specifically including sustainable multi-use areas
Tools for monitoring progress and aligning with key policies included	32	Does the plan's framework include procedures and indicators to measure progress against the baseline, status quo of the current MSP, EU policies for sustainability (i.e. MSPD, MSFD, Biodiversity Strategy, WFD, SEA) and regional sea requirements?	0%	The MSP regulatory framework does not include agreed monitoring standards and tools, nor does it reflect EU assessments or regional reports on environmental policy objectives (e.g. MPAs, GES)
			50%	EU status of the marine environment or regional report data was used as a baseline for spatial maps and monitoring standards, which measure implementation of the MSPD
			100%	MSP goals and measures are monitored against EU policies for sustainability (i.e. MSPD, MSFD, Biodiversity Strategy, WFD, SEA) and the plan's established environmental status baseline; data is generated for various indicators that monitor the plan's progress, which will be reported every three years
Entire sea area covered	33	Has the entire sea area been covered?	0%	The plan covers either a nation's territorial sea or its EEZ, but not both
			50%	nation's territorial sea and EEZ are both covered by different sub-plans with similar principles and alignment
			100%	All national waters are covered in a single plan which aligns with terrestrial plans
